

TC-K333ESL/K970ES

SERVICE MANUAL

AEP Model
TC-K970ES

E Model
TC-K333ESL

* Dolby noise reduction and HX Pro headroom extension manufactured under license from Dolby Laboratories Licensing Corporation. HX Pro originated by Bang & Olufsen.

"DOLBY", the double-D symbol  and "HX PRO" are trademarks of Dolby Laboratories Licensing Corporation.

Model Name Using Similar Mechanism	TC-K333ESG
------------------------------------	------------

Tape Transport Mechanism Type	TCM-200D4
-------------------------------	-----------

SPECIFICATIONS

Recording system 4-track 2-channel stereo
Fast winding time Approx. 90 sec. (with Sony C-60 cassette)
Bias AC bias
Heads Erasing head × 1 (S&F head)
Recording head × 1 (LA head)
Playback head × 1 (LA head)
Motors Capstan motor × 1
(direct-drive linear torque BSL motor)
Reel motor × 1 (DC motor)
DC motor × 1

Signal-to-noise ratio (at peak level)

Dolby NR switch	OFF	B-Type ON	C-Type ON
Cassette			
Type IV (Sony METAL-S)	61 dB	70 dB	76 dB
Type II (Sony UX-S)	59 dB	68 dB	74 dB
Type I (Sony HF-S)	57 dB	66 dB	72 dB

Total harmonic distortion 1.0% (with Sony METAL-S cassettes)

Frequency response (DOLBY NR OFF)

Type IV cassette (Sony METAL-S)	15 - 22,000 Hz (±3 dB, IEC) 15 - 16,000 Hz [±3 dB OVU(-4dB)recording]
Type II cassette (Sony UX-S)	15 - 20,000 Hz (±3 dB, IEC)
Type I cassette (Sony HF-S)	15 - 18,000 Hz (±3 dB, IEC)

Wow and flutter ±0.04% W.Peak (IEC)
0.024% WRMS (NAB)
±0.065% W.Peak (DIN)

Inputs

Line inputs (phono jacks)	Sensitivity	77.5 mV
	Input impedance	47 k ohms
CD DIRECT INPUT	Input impedance	47 k ohms

Outputs

Line outputs (phono jacks)	Rated output level	0.44 V at a load impedance of 47 k ohms
	Load impedance	Over 10 k ohms
Phones (stereo phone jack)	Output level	0 - 2.5 mW at a load impedance of 32 ohms

General

Power requirements 120-220-240V AC, 50/60Hz (AEP, Germany)
220-230V AC, 50/60Hz (E)

Power consumption 31 W

Dimensions

Approx. 470 × 140 × 380 mm (w/h/d)
(18 1/2 × 5 1/2 × 15 inches)

Weight

Approx. 12.0 kg (17 lbs 7 oz)

Supplied accessory

Model for other countries: Approx. 11.2 kg
Audio connecting cord (2)

Screws(8)

Wireless remote control unit*

Sony R6 (Size-AA) batteries (2)*

*Not supplied with model for AEP countries

Design and specifications subject to change without notice.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

TC-K333ESL : E Model

Operating Voltage

Before connecting the unit to the power source, check that the operational voltage of your unit is the same as the local power supply.

Where purchased	Operating voltage
European countries	220 – 230 V AC, 50/60 Hz
Other countries	120, 220 or 240 V AC adjustable, 50/60 Hz A voltage selector is located on the rear panel. If the selector must be reset, disconnect the AC power cord and set the selector to the appropriate voltage. 

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  OR DOTTED LINE WITH MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

For higher quality recording/playback

- **The Dolby HX PRO* system** which improves the linearity of the tape's high-range response during recording.
- **Bias and recording level calibration** which ensures optimum recording conditions to bring out the best in every tape.
- **Three-head system (separate recording, playback and erase heads)** which allows you to instantly check the recorded sound while recording is in progress.
- **Professional-level deck design** for high mechanical stability and maximum performance.

For your convenience

- **The AMS and Memory Play functions** which provide easy access to a desired selection.
- **Timer-activated playback and recording** through the use of an optional timer.

For easier operation

- **Easy-to-read digital linear counter** which shows the elapsed recording or playing time.

MODEL IDENTIFICATION*— Specification Label —*AEP, G Model : 220V $\sim$ 50/60Hz 31WE Model : 120, 220, 240V $\sim$ 50/60Hz 31W

SECTION 1 GENERAL

This section is extracted from instruction manual.

Identification of Front Panel Parts

For details, refer to the page number indicated in ●.

- 1 POWER switch
- 2 AMS (Automatic Music Sensor) buttons ●
- 3 Remote sensor
You can remotely control this cassette deck with:
— A remote commander that came with a Sony amplifier or receiver if it has the  mark and cassette deck control capability.
— An optional Sony remote commander with the  mark and cassette deck control capability.
- 4 LINEAR COUNTER ●
- 5 Counter buttons
RESET button ●
MEMORY button ● ●
DISPLAY MODE button ●
- 6 DOLBY HX PRO button ● ●
- 7 CALIBRATION button ●
- 8 INPUT button ●
- 9 PEAK PROGRAM METER ●
- 10 REC (recording) LEVEL control ● ●
(Continued on next page.)

For details, refer to the page number indicated in ●.

- (Continued from previous page.)
- 11 MONITOR switch ●
- 12 REC EQ CAL (recording equalizing calibration) switch (LOW, NORMAL, HIGH) ●
- 13 REC (recording) LEVEL control for calibration ● ●
- 14 BIAS control ● ●
- 15 DOLBY NR (noise reduction)/MPX FILTER switch ● ●
- 16 Cassette holder
- 17 OPEN/CLOSE button
- 18 Tape operation buttons and indicators
◀◀ (rewind) button
■ (stop) button
▶▶ (play) button and indicator
● (fast-forward) button
● REC (recording) button and indicator
|| PAUSE button and indicator
○ REC MUTE (record muting) button ●
- 19 PHONES jack (stereo phone jack) ●
- 20 PHONE (headphones) LEVEL control
- 21 TIMER switch ●

Remote Commander

(Except for European model)

The controls on the remote commander are identical in function and operation to those with the same name on the main unit.

For details, refer to the page number indicated in ●.

- 1 ▲ (open/close) button
- 2 DISPLAY button
- 3 Counter buttons
- 4 Tape operation buttons
- 5 CD (Compact Disc) buttons
for controlling Sony CD players
II (pause) button
II◀▶ buttons for locating selections sequentially
- 6 CD SYNCHRO buttons
for synchronized recording with a Sony CD player

Making an Optimum Recording According to the Tape Type

Bias and Recording Level Calibration

There are many different types of cassettes on the market, each with varying magnetic properties. Although your unit is equipped with the ATS (Automatic Tape Selection) system which sets the appropriate equalization characteristics and bias current for each tape type, an additional calibration adjustment can often produce even better results. Use the bias current and recording level calibration function to obtain the optimum recording conditions for your tape.

Bias calibration

Choosing the optimum bias current for a tape ensures minimum distortion and flat frequency response. Lowering the bias current boosts high-frequency response, but also results in higher distortion. Raising the bias, on the other hand, reduces distortion, but also dampens high-frequency response. Optimum bias is thus obtained when the bias current and high-frequency response are well balanced.

- If the bias current is higher or lower than the optimum setting for a certain tape, the frequency response changes as shown in the chart above. Changing the bias can thus be used to tailor the response to your liking, for example by slightly emphasizing the upper or lower end.
- The frequency response of metal tapes is much less affected by changes in the bias current than other tape types. With some tapes, the adjustment range of this deck ($\pm 20\%$) may therefore not be sufficient to cover every possible requirement.

Recording level calibration

Even when the recording level is adjusted correctly, using a tape with low sensitivity will result in a low playback level. The REC LEVEL calibration control allows you to compensate for sensitivity differences among tapes to equalize both recording and playback levels. This is especially important when using the Dolby NR system, since it is most effective when recording and playback levels are the same.

Making an Optimum Recording According to the Tape Type

1 Insert the cassette to be used for recording.

OPEN/CLOSE

2 Press CALIBRATION.

CALIBRATION

REC CAL

3 Activate the recording test tones:

REC MUTE or PAUSE

REC CAL

Playback level for an 8-kHz signal

Playback level for a 400-Hz signal

4 Adjust BIAS until both meters indicate equal playback levels.

BIAS

A high reading on the upper meter indicates a low bias current.

BIAS

A low reading on the upper meter indicates a high bias current.

5 Adjust REC LEVEL CALIBRATION until both meters reach the recommended level (REC CAL).

REC LEVEL CALIBRATION

The bias current is now adjusted to the optimum level and the tape sensitivity compensation has been set. Press **■**, then set CALIBRATION to OFF. Rewind the tape and start the actual recording.

REC CAL

Recommended level

Note

- The sound cannot be monitored during the calibration operation.
- It takes 2 to 3 seconds to stabilize the test tone level.

Making an Optimum Recording According to the Tape Type

Recording Equalization Calibration

Although bias current and equalization are automatically set by the Automatic Tape Selection (ATS) function for the tape being used, you can use the REC EQ CAL switch to change the recording characteristics according to the nature of the source material or to compensate for the particular characteristics of the tape.

Bias Calibration Recording

To modify bands of sound as required, use the REC EQ CAL switch in conjunction with bias calibration, which enables you to record according to the tape's characteristics.

• When recording music which has strong middle and low frequencies

Set the bias at flat with the REC EQ CAL switch set in the HIGH position to increase the bias current. Adjust BIAS so that the HIGH and LOW meters indicate equal readings.

• When recording music which has strong high frequencies

Set the bias at flat with the REC EQ CAL switch set in the LOW position to decrease the bias current. Adjust BIAS so that the HIGH and LOW meters indicate equal readings.

Note

With metal tape, because the amount of frequency characteristic modulation is not in proportion to that of the bias, the optimum bias current may not be obtained using the methods above.

Another use of the REC EQ CAL switch

When using a special tape, the BIAS control with the REC EQ CAL switch set in the NORMAL position may not cause the HIGH and LOW meters to indicate equal readings. If this occurs, adjust the BIAS control after setting the REC EQ CAL switch to HIGH or LOW.

Recording

What is the Dolby HX PRO System?

The Dolby HX PRO system provides improved linearity in high-range frequency response during recording. Tapes recorded with this system retain the same high quality even when played back on other tape decks.

As shown above, characteristics such as output level and distortion differ widely according to the bias (high-frequency) current. In conventional systems, the bias current is susceptible to variations in certain recording signals (see diagram below) which may cause fluctuations in frequency response, distortion, or other unwanted characteristics.

With the Dolby HX PRO system, the effective bias amount added to the bias current is controlled in millisecond units to greatly reduce distortion, improving linearity in high-range response and ensuring high-intensity recording with minimal distortion and noise.

SECTION 2

DISASSEMBLY

- If the parts are marked with the numbers ①, etc., remove them in the order of the number.

Cassette Holder

Ornamental Plate

Pinch Lever/Lever FR

- ① - ④ : Pinch lever S
- ① and ② : Pinch lever T
- △ and △ : Lever FR

Comparator Board/Capstan Board/Flywheel/FG Board

△ and ▽ : Comparator board

① - ④ : Capstan board

① - ③ : FG board (after removing 1 and 2)

Note: To remove the above parts with the base (D1) assembly, remove the four screws marked with ★.

MD board

Reel Motor Board

SECTION 3 ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

PRECAUTION

1. Clean the following parts with a denatured-alcohol-moistened swab:

record/playback head	pinch roller
erase head	rubber belts
capstan	idlers
2. Demagnetize the record/playback and erase head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.
4. After the adjustments, apply suitable locking compound to the parts adjusted.
5. The adjustments should be performed with the rated power supply voltage unless otherwise noted.

Tape Path Adjustment

- Refer to Adjustment Position on page 12.

Note: When using the adjustment methods for other than replacement reasons, please do not tamper unnecessarily with the adjustment screws or the erasehead because either the supply pinch roller guide or the record/playback head will be made the standard tape paths. Moreover, when it is necessary to adjust and replace two or more of any of the heads and/or pinch rollers, replace them one by one, completely taking out the first tape path, and then replacing the second one.

Preparation:

1. Mirror cassette CQ009C 8-909-708-01
(or CQ012C 8-909-708-02)

If one does not have this, cut out the sections of a 120-minute cassette shell as indicated below and use that cassette.

2. Phillips screwdriver (medium-size):
For the head adjustment screws
Blade-type screwdriver (large-size):
For the supply pinch roller adjustment screws
3. Pen light
4. WS-48B (3 kHz, 0 dB)
5. P-4-A100 (10 kHz, -10 dB)

Definition of Terms: The figures are of a record/playback head.

Adjustment Method:

Supply Pinch Roller

Note: Only perform this adjustment when the supply pinch roller is to be replaced.

1. Insert the mirror cassette and put the unit in record/playback mode.
2. Check to see whether the tape is curling at the record/playback head guide or the pinch roller guide.
If it is curling, remove the curl by adjusting the tape curl adjustment screw. Then, check that the tape is running past the middle of the erasehead.

Record/playback Head

Note: Only perform this adjustment when the record/playback head is to be replaced.

1. Insert the mirror cassette and put the unit in record/playback mode.
2. **(Height Adjustment)** Check to see if the tape is curling at the tape guide of the head. If it is curling, tighten screws A, B, and C, respectively by the same angle, moving the head so that it

remains at the same angle throughout the procedure. If it curls on the bottom side of the mirror cassette (actually the inner side), tighten all the screws equally; but loosen them if the tape begins to curl on the top side (outer side).

3. (Declination Adjustment) While in the record/playback position, set the back tension to 0 (wind the supply reel with something thin like a pencil in a counterclockwise direction) and make sure there is no curling or shifting (shifting up/shifting down) at the guide of the record/playback head.

Because shifting can only occur due to a difference in the width of the tape and that of the tape guides (curling will otherwise occur), it is necessary to pay close attention since it can be easily overlooked. When there is a shift, tighten screws Ⓐ and Ⓒ equally and change the declination of the head. If the tape is shifting up, tighten the screws, and if it is shifting down, loosen them.

4. Repeat the adjustments in steps 2 and 3 and fine adjust the height and the declination.
5. (Preliminary Azimuth Adjustment) After demagnetizing and cleaning the adjustment head, play back WS-48B (3 kHz, 0 dB). Turn screw Ⓒ so that the reading on the level meter of the unit or that of the level meter connected to LINE OUT is maximized. If the screw is turned at least half a revolution, repeat the adjustments from step 1.
6. (Tape Path Check) Connect the oscilloscope to LINE OUT and play back P-4-A100 (10 kHz, -10 dB) to display a resurge waveform. After 20 seconds of record/playback (after the tension within the loop has been increased sufficiently), make sure the variation in the resurge is within ± 90 degrees (within ± 45 degrees is desired). If the variation is greater than this, it is because the declination and/or the height adjustment is not perfect. Repeat the adjustments from step 1.

Erasehead

Note: Only perform this adjustment when the erasehead is to be replaced.

1. Insert the mirror cassette and put the unit in record/playback mode.
2. (Azimuth Adjustment) Adjust the azimuth of the erasehead by adjusting screws Ⓐ and Ⓑ so that the tape runs as evenly as possible.

(The erasehead as seen when erasing the mirror cassette.)

3. (Height adjustment) Turn screws Ⓐ, Ⓑ, and Ⓒ all by the same angle so that the portions of the erasehead visible at top and bottom are nearly of equal width. If the width at the top is greater, tighten the screws; if the width at the bottom is greater, loosen the screws.

4. (Declination Adjustment) Leaving it in the playback position, put the back tension to 0 and make certain the erasehead part and supply pinch roller guide part do not shift. If there is a shift, turn the screw ⑩ and change the declination. Looking at it using the mirror cassette, if the tape shifts up, tighten the screw, and if it shifts down, loosen the screw.
5. Repeat the adjustments beginning with step 2 and fine adjust the height and declination. And make sure the tape does not curl up on the pinch roller guide or the guide part of the record/playback head.
6. (Depth Adjustment) In order to make the entire head play the tape smoothly, and to make sure the depth of the erasehead is neither too shallow nor too deep, loosen screw ⑥ a bit.

**Check**

1. Check to make sure that there are no curls or shifts throughout the whole tape path and that the tape runs smoothly.
2. Reapply the locking compound to the adjusted screws. (The locking compound should only be applied to screw ⑥ after the azimuth has been adjusted.)

Adjustment Position : As seen from the cassette, side (top) and MD as seen head on (bottom).

**Pinch Roller Pressing Force Measurement**

Mode : playback

Hook needle of the tension gauge to the pinch roller shaft and push back pinch roller to detach it from capstan. Then, return it gradually to capstan and read the gauge when the pinch roller begins turning.

Standard Limits :

Tape-up side : 270 – 350g (9.5 – 12oz)

Supply side : 180 – 280g (6.4 – 9.9oz)

**3-2. ELECTRICAL ADJUSTMENTS**

Note: The adjustment should be performed in the order given in this service manual.

The adjustments should be performed for both L-CH and R-CH.

- Simultaneous REC/PB Mode:

Input the signals to LINE IN terminal and set to REC mode. Set the monitor switch to TAPE, and monitor the recorded signal from LINE OUT terminal.

- Switch Position:

DOLBY NR..... OFF
 TIMER..... OFF
 MONITOR..... TAPE
 HX PRO OFF
 CALIBRATION..... OFF
 CD DIRECT..... OFF
 BIAS CENTER CLICK
 REC LEVEL CENTER CLICK

- Standard Record:

Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

Standard Input Level

Input Terminal	LINE IN
source impedance	10 k Ω
input level	0.25 V (–10 dB)

Standard Output Level

Output Terminal	LINE OUT
load impedance	47 k Ω
output level	0.44 V (-5 dB)

Torque Adjustment and Measurement

1. Insert a tape for torque measurement, CQ-102C, and put the set to PLAY mode. Adjust RV801 so that the reading of the torque meter is 40 ± 5 g.cm.
2. After the adjustment, measure the back-tension and the FF/REW torque and check that the following specifications are satisfied.

Torque	Torque Meter	Reading
FWD	CQ-102C	35 - 45 g·cm (0.49 - 0.64 oz·inch)
FWD Back tension	CQ-102C	7 - 12 g·cm (oz·inch)
FF/REW	CQ-201B	55 - 120 g·cm (0.97 - 1.67 oz·inch)

Tape Speed/WOW Check

Procedure:

1. Measure the output frequency and the WOW value while playing back the tape top of the test tape.
2. Turn over the test tape, measure the output frequency and the WOW value, and check the difference from the values of the step 1.

Adjustment Limits :

TAPE SPEED deviation:	within 2,990 to 3,010 Hz
TAPE SPEED fluctuating width:	within 2,990 to 3,010 Hz
WOW (WRMS):	0.037 % or less

MPX FILTER Check

Setting : DOLBY switch : OFF
MPX FILTER switch : OFF

Procedure :

1. Mode: stop

2. Apply 315Hz, 0.25V (-10dB) signal and adjust REC LEVEL (RV501) control so that the LINE OUT level is 0.44V (-5dB).
3. Apply 19kHz 0.25V (-10dB) signal and confirm that the LINE OUT level is 0.013V (-35dB) or less.

Adjustment Limits :

DOLBY NR switch : B or C
MPX FILTER switch : Line output level when ON.
315Hz : Within 0.49 to 0.39V (within -4dB to -6dB)
19kHz : 0.013V (-35dB) or less

Record/Playback Head Azimuth Adjustment

Procedure :

1. Mode : playback

2. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5dB.

Adjustment Location :

Playback Level Adjustment

Procedure:

Mode: playback

test tape
P-4-L300
(315 Hz, 0 dB)

Adjust RV101 (L-CH) and RV201 (R-CH) to obtain the specified LINE OUT level.

Adjustment Limits :

LINE OUT level: 0.42 to 0.46 V
(-5.3 to -4.7 dB)

Level difference between channels:
less than 0.5 dB

Check that the LINE OUT level does not change in playback mode while changing the mode from playback to stop several times.

3. Phase check

- Play mode -

Reference tape for adjustment
P-4-A100
(10kHz, -10dB)

- Check that the phase difference between L-ch and R-ch is within 0 ~ (same to 90°).

Bias OSC Frequency Adjustment

Procedure :

- Record mode

- Connect the frequency counter to the inductor which functions at 10 mH. (When the inductor is a closed magnetic circuit, redesign the inductor to be an open magnetic circuit.)
- Remove the cassette lid, insert the cassette, and put the unit into REC mode.
- Move the inductor from the side in close to the erase head to check the value of the bias.
- Adjust CP501 so that the reading on the frequency counter is 105kHz ± 1kHz.

Bias current adjustment

- Set the HX PRO switch to ON and insert the METAL tape.
- Set RV104, RV204, RV105, RV205, RV106, and RV206 to be in the center position.
- Connect a digital voltmeter to CNE504 (between 2-1 and 2-3) and adjust the adjustment cores of T101 and T201 so that the voltage is minimized.

CrO₂ Bias and Record Level Adjustment

Note : This adjustment should be made before Record Bias Adjustment.

Setting:

REC LEVEL knob: standard record position
(See page 12.)

HX PRO switch : ON

Procedure:

- Mode: simultaneous REC/PB

- Adjust RV106 (L-CH) and RV206 (R-CH) so that the playback output level of 10kHz signal is 0.3dB - 0.3dB with respect to that of 315Hz. . . . Record Bias Adjustment.
- Adjust RV102 (L-CH) and RV202 (R-CH) so that the playback output level of 315Hz is -25.3dB to -24.7dB. . . . Record Level Adjustment.

Metal Bias Adjustment

Setting :

REC LEVEL Knob : standard record position
(See page 12.)

Procedure :

- Mode : simultaneous REC/PB

- Adjust RV510 (L-CH) and RV205 (R-CH) so that the difference between the playback output at 315Hz and that of 10kHz in R-CH is within 0.5 dB to -0.5dB.

Normal Bias Adjustment

Setting:

REC LEVEL knob: standard record position
(See page 12.)

Procedure:

- Mode: simultaneous REC/PB

- Set the HXPRO switch to ON.
- Adjust RV103 (L-CH) and RV203 (R-CH) so that the difference between the playback output at 315Hz and that of 10kHz in R-CH is within 0.5dB to -0.5dB.
- Set the HXPRO switch to OFF.
- Adjust RV104 (L-CH) and RV204 (R-CH) so that the difference between the playback output at 10kHz when the HXPRO is ON and that of 10kHz when ON is within 0.5dB to -0.5dB.

Meter Level Adjustment

Setting :

REC LEVEL Knob : standard record position
(See page 12.)

MONITOR : SOURCE

Procedure :

- Stop mode

- Adjust RV107 (L-CH) and RV207 (R-CH) so that a reading of the meter is set to 0VU and the lamp is lit.
- Adjust REC level so that the LINE OUT level is set to +10dB and check that all the lamps are lit.

Calibration OSC and Calibration Meter Adjustment

Setting : CALBRATION switch : ON

Procedure (OSC OUT LEVEL) :

- Mode : record (no-signal (LINE INPUT))

- Adjust RV504 so that a check-point level at 400Hz is +10dB.
- Adjust RV503 so that a check-point level at 8kHz is +10dB.

Procedure (CAL METER ADJ) :

- Put the set in record mode and adjust RV208 (HIGH) so that HIGH FREQ segments in the CAL LEVEL meter light thoroughly up to 0 VU as shown in the figure below. Segment (a) may flicker.

- Preset RV108 (LOW) so that segment (a) in LOW FREQ CAL LEVEL meter lights. Then adjust RV204 to the point where segment (a) goes out.

Location Diagram of the Adjustment Parts

SECTION 4

DIAGRAMS

4-1-1. IC502, 505 (CX20188) PIN FUNCTIONS

An electronic switch circuit for the operation mode control is included. Controls are performed by adding direct current voltages VH, VM, and VL to Dolby OFF/B/C and calibration/REC/Playback terminals.

CX20188	Pin name	Description
Pin No.		
1.	Vcc	Positive power supply terminal.
2, 41.	REC IN	Recording input terminal.
3.	I REF	Reference current input terminal.
4, 39.	PB IN	Playback input terminal.
5.	CAL/REC/PB	Calibration/recording/playback select terminal
6, 37.	PB FB	Playback feedback terminal.
7, 36.	REC FB	Recording feedback terminal.
8, 35.	GND	GND terminal.
9, 34.	LINE OUT	Line output (decode output) terminal.
10, 33.	SSK	Spectral skewing switch terminal.
11, 32.	VF IN	Encode circuit input terminal.
12, 31.	HPF H	HLS high-pass filter terminal.
13, 30.	TCH 2	HLS detector time constant terminal 2.
14, 29.	TCH 1	HLS detector time constant terminal 1.
15, 28.	WT H	HLS encoder error reduction terminal.
16, 27.	TCL 2	LLS detector time constant terminal 2.
17, 26.	TCL 1	LLS detector time constant terminal 1.
18, 25.	WT L	LLS encoder error reduction terminal.
19, 24.	HPF L	LLS high-pass filter terminal.
20, 23.	ANT S	Anti-saturation terminal.
21, 22.	REC OUT	Recording output (encode output) terminal.
38.	OFF/B/C	Dolby NR off/B type/C type select terminal.
40.	CAL IN	Calibration input terminal.
42.	Vee	Negative power supply terminal.

MODE	VOLT
VH	3 to 9.9V
VH	-0.7 to 0.7V
VL	-9.9 to -3

4-1-2. IC601 (M50940-313SP) PIN FUNCTIONS

Level meter display of 24-segment fluorescent display, etc., are performed by receiving direction from the master microcomputer (IC801).

Pin No.	Pin name	I/O	Description
1.	Vref	I	A/D input-port reference voltage input(+5V)
2.	ϕ L	I	Not used. (Connected to +5V)
3.	ϕ R	I	Not used. (Connected to +5V)
4.	DATA	I	Data input from the master microcomputer(IC801)(analog)
5.~6.	ADE1~ADRO	I	Data input from the master microcomputer(IC801)(analog)
7.	KEY	I	Not used. (Connected to +5V)
8.	LEVEL L	I	Level meter L-CH input(analog) from the meter amplifier(IC514)
9.	LEVEL R	I	Level meter R-CH input(analog) from the meter amplifier(IC514)
10.~13.	$\overline{\text{GRID6}}\sim\overline{\text{GRID3}}$	0	Not used.
14.~15.	$\overline{\text{GRID2}}\sim\overline{\text{GRID1}}$	0	Fluorescent display grid output
16.	$\overline{\text{COO}}$	0	Not used.
17.	$\overline{\text{PLAY}}$	0	Not used. (Connected to pin ⑱.)
18.	$\overline{\text{PLAY}}$	0	Not used.
19.	$\overline{\text{PAUSE}}$	0	Not used.
20.	$\overline{\text{REC}}$	0	Not used.
21.	$\overline{\text{TAPE}}$	0	Fluorescent display segment output("TAPE" displayed). "L": TAPE displayed. "H": SOURCE displayed.
22.	$\overline{\text{OVER LEVEL}}$	0	Fluorescent display segment output("OVER LEVEL" displayed). It is displayed when "L".
23.	TYPE I	0	Fluorescent display segment output("TYPE I" displayed). It is displayed when "L".
24.	TYPE II	0	Fluorescent display segment output("TYPE II" displayed). It is displayed when "L".
25.	TYPE IV	0	Fluorescent display segment output("TYPE III" displayed). It is displayed when "L".
26.	CNVss	-	Power supply terminal(GND)
27.	$\overline{\text{RESET}}$	I	Reset input
28.	XIN	I	Clock input(4MHz)
29.	XOUT	0	Clock output.
30.	XCIN	-	Not used. (Connected to GND)
31.	XCOUT	-	Not used.
32.	Vss	-	Power supply terminal(GND)
33.	Φ	0	Not used.
34.	VER	I	Version switching input(Always set to "L")
35.	$\overline{\text{TEST}}$	I	Test mode input. "L": All the lamps of the meter are lit.
36.	CAL	I	Calibration switch(S602) input. "L": CAL mode. "H": Normal mode.
37.	IN	I	Not used. (Connected to GND.)
38.	VP	I	Fluorescent display segment output's pull-down power supply terminal(-22V)
39.~62.	S23~S0	0	Fluorescent display segment output(meter display)
63.	AVcc	-	Power supply terminal(+5V)
64.	Vcc	-	Power supply terminal(+5V)

4-1-3. IC801 (M50964-220SP) PIN FUNCTIONS

Pin No.	Pin name	I/O	Description
1.	VCC		Power supply: +5V.
2.	AVss		Analog GND.
3.	Vref	I	A/D port reference voltage input.
4.	DA		Not used for this model.
5.	PWM		Not used for this model.
6.	P.OFF		Not used for this model. Connected to GND.
7.	LED	O	PAUSE LED output.
8.	LED	O	REC LED output.
9.	LED	O	PLAY LED output.
10.	AD1	I	Key input. 0V=▲, 1V=■, 2V=◀, 3V=▶, 4V=●.
11.	AD2	I	Key input. 0V=▶, 1V=■, 2V=◀, 3V=▶, 4V=○.
12.	AMS SIG	I	AMS signal input. No song detected = Low. Song detected = High.
13.	AD4	I	Key input. 2V = DISPLAY. 3V = MONITOR.
14.	CODE	I	Remote control category select switch.
15.	ALB		Connected to 5V.
16.	φR	I	Take-up reel base sensor input.
17.	φL	I	Supply reel base sensor input.
18.	C RESET		Model select input. Connected to GND.
19.	C MEMORY		Model select input. Connected to GND.
20.	COO		Not used for this model.
21.	POWER IN	I	Power on and off detection.
22.	SIRW	I	SIRCS phase input.
23.	SIRE	I	SIRCS reverse phase input.
24.	T-REC	I	Timer REC switch input.
25.	T-PLAY	I	Timer PLAY switch input.
26.	INT	I	External interruption input. Interruption process is performed when the power is on or off.
27.	Vss		GND.
28.	RESET	I	Reset input.
29.	XIN	I	Clock input (4 MHz).
30.	XOUT	O	Clock output (4 MHz).
31.	φout		Not used for this model.
32.	Vss		GND.
33.	C1	I	Rotary encoder input to detect the position of the head base of the mechanical block.
34.	C2	I	Rotary encoder input to detect the position of the head base of the mechanical block.
35.	C3	I	Rotary encoder input to detect the position of the head base of the mechanical block.
36.	C4	I	Rotary encoder input to detect the position of the head base of the mechanical block.
37.	OPEN SW	I	OPEN switch input of the mechanical block.
38.	CLOSE SW	I	CLOSE switch input of the mechanical block.
39.	DOOR SW	I	DOOR switch input of the mechanical block.
40.	REC SW	I	REC switch input of the mechanical block.
41.	M PLAY	O	Reel motor rotates at PLAY speed.
42.	M FAST	O	Reel motor rotates at FF/REW speed.
43.	M FWD	O	Reel motor rotates.
44.	M REV	O	Reel motor rotates in reverse.
45.	CAM DOWN	O	Head base DOWN output of the mechanical block
46.	CAM UP	O	Head base UP output of the mechanical block
47.	C OFF	O	Counter light-off output
48.	M OFF	O	Meter light-off output
49.	BIAS	O	Bias oscillation on and off control
50.	R Mt	O	REC MUTE.
51.	M Mt		Not used for this model.
52.	T Mt	O	Tape MUTE. Goes to low when the tape is being played.
53.	S Mt	O	Source MUTE. Goes to low three seconds after the power is on.
54.	AMS	O	AMS switch output. Goes to low when AMS is being used.
55.	MONITOR		Not used for this model. Connected to GND.
56.	HALF		Not used for this model. Connected to GND.
57.	DAT3	O	Outputs parallel data for the counter display.
58.	DAT2	O	Outputs parallel data for the counter display.
59.	DAT1	O	Outputs parallel data for the counter display.
60.	DATO	O	Outputs parallel data for the counter display.
61.	DATD	O	Outputs parallel data for the counter display.
62.	CLK	O	Clock output to transmit the parallel data.
63.	LATCH	O	Output for latching the transmitted data.
64.	CAL IN	I	CAL switch input.

4-1-4. IC881 (HD404240A80S) PIN FUNCTIONS

Fluorescent dynamic display is performed by receiving count data from the master microcomputer (IC801)

Pin No.	Pin name	I/O	Description
1.	SG3	O	Fluorescent display grid output
2.	G4	O	Fluorescent display grid output
3.	dot	O	Fluorescent display segment output
4.	P DWN	I	Pull-down power supply terminal for fluorescent display segment output (-22V)
5.~11.	g~a	O	Fluorescent display segment output
12.	-	-	Not used.
13.~16.	DIM1~DIM4	I	Dimmer input (Pins ⑭ and ⑯ are "H". Others are opened and fixed: Blanking time 550usec; grid ON time 450usec.)
17.~20.	-	-	Not used.
21.	Vcc	-	Power supply terminal (+5V)
22.	SCK	I	Shift clock input (250kHz) from the master microcomputer (IC801)
23.	SI	I	Serial data input (Data are sent by 1 byte every 6msec.) from the master microcomputer (IC801)
24.~25.	-	-	Not used.
26.	RESET	I	Reset input from the master microcomputer (IC801). Reset when "H".
27.	TEST	I	Connected to +5V.
28.	OSC1	I	Clock input (4MHz)
29.	OSC2	I	Clock input (4MHz)
30.	GND	-	Power supply terminal (GND)
31.~34.	-	-	Not used.
35.	MLED	O	Not used. (Connected to +5V)
36.~40.	-	-	Not used.
41.	G2	O	Fluorescent display grid output
42.	G1	O	Fluorescent display grid output

CAPSTAN C.O.C

COMPARATOR MD

NOTE :

The components identified by mark Δ or dotted line with mark Δ are critical for safety.
Replace only with part number specified.

When indicating parts by reference number, please include the board name.

SECTION 6
ELECTRICAL PARTS LIST

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- - XX, - X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
All resistors are in ohms.
METAL : metal-film resistor
METAL OXIDE : Metal Oxide-film resistor
F : nonflammable
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS
In each case, u : μ , for example :
uA... : μ A..., uPA..., μ PA...,
uPB..., μ PB..., uPC..., μ PC...,
uPD..., μ PD...
- CAPACITORS :
uF : μ F
- COILS
uH : μ H

TC-K333ESL/K970ES

SONY[®] SERVICE MANUAL

AEP Model
TC-K970ES

E Model
TC-K333ESL

SUPPLEMENT-1

File this Supplement with the Service Manual.

Subject : The gold type of TC-K970ES has been added.

- The gold type is the same as black type except for the parts as shown in the table.
- Use this manual for servicing the gold-type set.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
